

ClearSight®

Vegetation Control Rolled Matting System

Made with California recycled rubber, ClearSight® Vegetation Control Rolled Matting System is the ideal roadside management treatment to prevent vegetation growth under and around guardrails, sign posts and fencing.

Benefits

- Cost effective alternate to light concrete
- Installs twice as fast as mats with less laborers
- Standard roll lengths are 200 linear feet
- Custom lengths are available for curved roads/areas
- Reduces herbicide use and labor costs to maintain median landscaping
- All crumb used in production is from discarded truck tires that are diverted from California landfills
- U.S. Rubber is a second chance employer. Approximately half of our employees are formerly incarcerated individuals that now live, productive crime-free lives

Sourced and Manufactured in California

The primary raw material for ClearSight® Vegetation Control, which accounts for nearly 95% of the total product content, is post-consumer California recycled crumb rubber. In 2021, U.S. Rubber diverted 14,535,792 pounds of discarded tires from California landfills. The remaining raw materials used to produce ClearSight® are a binder and a treatment resin. Both are sourced from a single Southern California adhesive manufacturer.

SPECIFICATIONS

Weight	2.9 lbs/sq. ft. (26 lbs/sq. yd.)
Roll Size	4' x 200' x 0.5" 4' x 50' x 0.5"
Content	100% SBR California recycled tire rubber
Installation	Rolled out on site
Maintenance	Maintenance free
Warranty	25 year limited
